Setting up the Server using Raspbian Linux

- Connect the mouse and keyboard in the usb ports. It does not matter which one is on top.
- Connect HDMI to HDMI of monitor and raspberry pi or else VGA to HDMI if you have a VGA monitor.
- Do a direct connect to the internet from the pi as you will be downloading files to the pi
- Plug the SD card in
- Connect the pi power supply.
- There will be some rolling text that starts. Leave it alone and when it is finished the GUI interface will be displayed.
- Double-click on the LXTerminal icon to open the terminal window.
- From this point on you will be entering Linux commands. You need to be at home to finish.
- Be sure to finish a section before you quit. Start with A3.
- When ready to quit for the day, close out LXTerminal selecting Quit
  - Click on the shutdown icon and do the following
  - Unplug the power
  - Remove your SD card and put in plastic container
  - Unplug the other attachments
- I suggest you use raspberry for your Linux password
- You can enlarge your text on LXTerminal by
  - Select Edit
  - Select Preferences
  - In upper right corner select the size font you want
